

ShadowPath

Enterprise Active Directory Security Assessment

Platform	ShadowPath
Assessment	Active Directory Attack Intelligence
Generated	05 July 2026
Classification	Confidential

Generated automatically by ShadowPath

Executive Summary

6	6	0	0
Findings	Critical	High	Medium

ShadowPath completed an enterprise Active Directory security assessment. Multiple attack paths were analysed to identify privilege escalation opportunities, lateral movement routes, and high-value assets requiring immediate security attention.

Environment Overview

Assessment Scope	Active Directory
Attack Paths	6
Critical Findings	6
High Findings	0
Medium Findings	0
Low Findings	0
Assessment Engine	ShadowPath

Security Posture

Overall Security Score	40/100
Security Posture	Critical
Critical Findings	6
High Findings	0

Attack Intelligence

The following attack paths were identified and ranked based on calculated enterprise risk.

Severity Critical	Risk Score 100
Attack Path helpdesk01 → HelpDesk → ITSupport → ServerAdmins → SP-DomainAdmins	
Description ShadowPath identified a privilege escalation path capable of traversing helpdesk01 → HelpDesk → ITSupport → ServerAdmins → SP-DomainAdmins. This attack path could allow an attacker to obtain elevated privileges if exploited.	

Severity Critical	Risk Score 100
Attack Path alice → ITSupport → ServerAdmins → SP-DomainAdmins	
Description ShadowPath identified a privilege escalation path capable of traversing alice → ITSupport → ServerAdmins → SP-DomainAdmins. This attack path could allow an attacker to obtain elevated privileges if exploited.	

Severity Critical	Risk Score 100
Attack Path bob → ServerAdmins → SP-DomainAdmins	
Description ShadowPath identified a privilege escalation path capable of traversing bob → ServerAdmins → SP-DomainAdmins. This attack path could allow an attacker to obtain elevated privileges if exploited.	

Severity Critical	Risk Score 100
Attack Path charlie → BackupOperators → ServerAdmins → SP-DomainAdmins	
Description ShadowPath identified a privilege escalation path capable of traversing charlie → BackupOperators → ServerAdmins → SP-DomainAdmins. This attack path could allow an attacker to obtain elevated privileges if exploited.	

Severity Critical	Risk Score 100
Attack Path intern01 → HelpDesk → ITSupport → ServerAdmins → SP-DomainAdmins	
Description ShadowPath identified a privilege escalation path capable of traversing intern01 → HelpDesk → ITSupport → ServerAdmins → SP-DomainAdmins. This attack path could allow an attacker to obtain elevated privileges if exploited.	

Severity Critical	Risk Score 100
Attack Path svc_backup → BackupOperators → ServerAdmins → SP-DomainAdmins	
Description ShadowPath identified a privilege escalation path capable of traversing svc_backup → BackupOperators → ServerAdmins → SP-DomainAdmins. This attack path could allow an attacker to obtain elevated privileges if exploited.	

MITRE ATT&CK; Summary

Technique	Occurrences
T1078	6
T1068	6
T1484	6
T1098	5
T1021	5
T1070	1

Executive Remediation Roadmap

Immediate	Remediate all Critical privilege escalation paths.
High Priority	Review privileged group memberships and delegated rights.
Medium Priority	Reduce excessive permissions across service accounts.
Continuous	Perform recurring Active Directory attack-path assessments.

Appendix

This report was generated automatically by ShadowPath. Risk scores are calculated using attack-path analysis, privilege relationships, and security heuristics.

#	Severity	Risk
1	Critical	100
2	Critical	100
3	Critical	100
4	Critical	100
5	Critical	100
6	Critical	100
